THE NEXT LEVEL POWER OF TELECOMMUNICATIONS: PREDICTIVE AI

Redefine speed, scale, and service with AI built for performance.

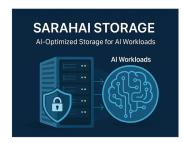

SARAHAI (Situational Awareness Response And Help AI) enables telecom leaders from network optimization to customer experience the abiity to operate ahead of demand and disruption.

Network optimization ensures AI clusters move massive data fast and efficiently, maximizing performance across high-bandwidth, low-latency connections.

Al-powered video inference using IP cameras delivers instant analysis, precise detection, and low-latency decisions—at scale.

Predictive caching, NVMe/RDMA throughput, GPU-accelerated processing, and real-time monitoring for deeper system insights.

Rolling forecasting module with automated anomaly detection instantly identifies price and load irregularities for proactive decision-making.

SARAHAI's pattern-based framework powers early detection of network anomalies and usage patterns, ensuring telecom networks operate at peak performance, scaling securely and delivering unmatched service speed.

Accelerate Intelligence Across Your Network. With SARAHAI, optimize bandwidth, predict service disruptions, and deliver superior customer experiences. Equip your network with AI that leads the future of connectivity today. Contact Eric Frazier (408) 556-0685 or Rick Bryant (832) 752-8875 at Tensor Networks.
